

User Stories & Acceptance Criteria: SecureCare Clinic Management System

Epics Overview

1. **Identity & Access Management (IAM)**
 2. **Patient Administration**
 3. **Clinic Scheduling**
 4. **Clinical Operations (EMR)**
-

Epic 1: Identity & Access Management (IAM)

US-1.1: Staff Account Creation

As a System Admin, **I want to** create user accounts for Doctors and Receptionists and assign specific roles, **So that** they can access the system with appropriate permissions.

Acceptance Criteria: - ☐ Admin can input Email, Password, and Role (Doctor/Receptionist). - ☐ System hashes the password before saving (e.g., BCrypt). - ☐ System prevents creating a user with a duplicate Email. - ☐ Only users with "Admin" role can access this feature.

US-1.2: Secure Login

As a User (Admin, Doctor, Receptionist, Patient), **I want to** log in using my credentials, **So that** I can securely access my data.

Acceptance Criteria: - ☐ User provides Email and Password. - ☐ On success, system returns a JWT (JSON Web Token) containing claims (Id, Role). - ☐ On failure, system returns a generic "Invalid Credentials" error. - ☐ Passwords are never returned in the response.

Epic 2: Patient Administration

US-2.1: Register New Patient

As a Receptionist or Admin, **I want to** register a new patient with their demographic details, **So that** they can receive medical services.

Acceptance Criteria: - ☐ Required fields: Name, National ID, DOB, Gender, Phone. - ☐ System validates that National ID is unique. - ☐ System validates that Email is unique (if provided). - ☐ Upon saving, a unique Patient ID is generated.

US-2.2: Patient Search

As a Staff Member (Receptionist, Doctor), **I want to** search for existing patients by Name or National ID, **So that** I can retrieve their records or book appointments.

Acceptance Criteria: - [] Search returns partial matches for Name. - [] Search returns exact matches for National ID. - [] Results show minimal details (Name, DOB, ID) to confirm identity.

US-2.3: Update Contact Information

As a Patient, **I want to** update my phone number and address, **So that** the clinic can contact me.

Acceptance Criteria: - [] Authenticated Patient can only update their own record. - [] Patient *cannot* update their National ID or Medical History.

Epic 3: Clinic Scheduling

US-3.1: View Available Slots

As a Receptionist or Patient, **I want to** view available appointment slots for a specific doctor on a specific date, **So that** I can choose a convenient time.

Acceptance Criteria: - [] Input: Doctor ID, Date. - [] Output: List of time slots that are not currently booked. - [] Response time is under 300ms (NFR).

US-3.2: Book Appointment

As a Receptionist, **I want to** book an appointment on behalf of a patient, **So that** I can schedule their visit.

Acceptance Criteria: - [] System checks availability immediately before confirming (Double-booking prevention). - [] Appointment status is set to "Pending" or "Confirmed". - [] System links Patient ID and Doctor ID to the appointment.

US-3.3: Doctor Schedule View

As a Doctor, **I want to** view my own list of upcoming appointments, **So that** I can prepare for my day.

Acceptance Criteria: - [] Doctor sees only appointments assigned to them. - [] List includes Patient Name and Time. - [] Doctor cannot see appointments for other doctors.

Epic 4: Clinical Operations (EMR)

US-4.1: Record Prescription

As a Doctor, I want to create a prescription for a completed appointment, **So that** the medical advice is documented.

Acceptance Criteria: - [] Can only create prescription if Appointment Status is "Completed". - [] Can only create prescription for appointments assigned to the logged-in Doctor. - [] Record includes Medication Details and Notes. - [] Once saved, the record is **Immutable** (cannot be edited/deleted).

US-4.2: View Personal Medical History

As a Patient, I want to view my past appointments and prescriptions, **So that** I can track my health history.

Acceptance Criteria: - [] Patient sees a list of their own past appointments. - [] Patient can click to view prescription details for those appointments. - [] Patient receives a 403 Forbidden error if trying to view another patient's data.
